Infinity (symbol: ∞) is a concept describing something without any bound or larger than any natural number. Philosophers have speculated about the nature of the infinite, for example Zeno of Elea, who proposed many paradoxes involving infinity, and Eudoxus of Cnidus, who used the idea of infinitely small quantities in his method of exhaustion.

In mathematics, a geometric series is a series with a constant ratio between successive terms. For example, the series $1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots$ is geometric, because each successive term can be obtained by multiplying the previous term by $1/2$.

Abstract. We define a certain finite set in set theory $\mathcal{P}(X)$ and prove that it exhibits a universal extension property: it can be any desired particular finite set in the right set-theoretic universe and it can become successively any desired larger finite set in top-extensions of that universe.
